

SAP BW system review

Identify potential improvement areas or bottlenecks

Challenge

Information growth, the handling of data loads and presentation of data at the right time is one of the biggest challenge for BW Systems.

Corporate wide standardization for BW application architecture and development becomes more and more importance the more complexity of company processes are part of the BW information platform.

The right system set up and standardized application design is the key to be prepared for future requirements and changes.

What is the current status of your environment?

ZPARTNER review for BW helps to identify and eliminate system quality gaps and keeps the

Identify the bottlenecks & problem areas and get the knowledge about improvements

Motivation

The goal is to get a clear picture on system status and potential problem areas. ZPARTNER system review gives alternatives to improve the overall quality of the BW system:

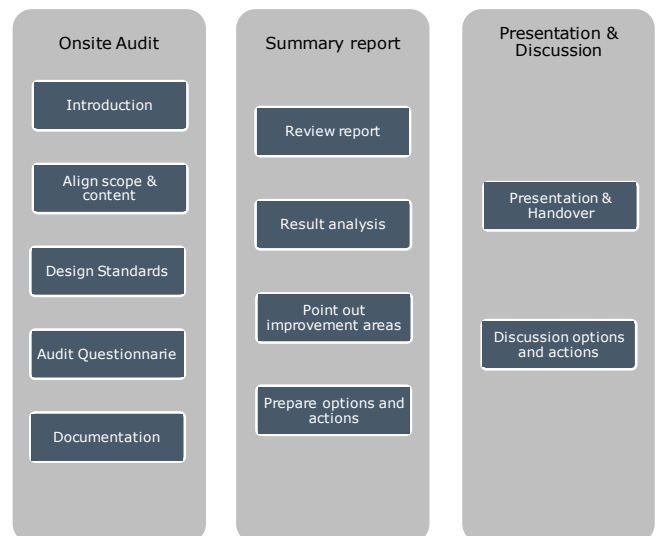

- **Architecture and development rules**
- **System set up and stability**
- **Source system extraction**
- **Data management and transformation**
- **Database sizes and statistics**
- **Reporting set up and modelling**

The BW system review is the first step for identification of quality and improvement tasks across your system and application landscape.

Approach

Based on ZPARTNER questionnaire the system status will be evaluated. Following key areas are the basis for system audits.

- **System set up**
- **Extraction**
- **Data Warehousing / Architecture**
- **Reporting**

Our approach consists of specific systems checks to identify problem zones or bottlenecks. Based on this corresponding improvement alternatives will be presented. In the end, an individual optimization task plan can be initiated.

Focus: System optimization & Quality improvement.

BW system review package content

Our package consists of daily workshops together with IT – and operation responsible employees. Different areas will be analyzed in detail to identify bottlenecks or potential for improvements. According to your environment, the corresponding checks and analysis steps are selected into and executed. Based on our knowledge and the outcome of the analysis the most relevant problem zones are visible. During an individual findings & recommendation workshop, we will give you the decision base to initiate necessary actions for system & process improvement in the end.
